1 GRAPHVIZ INSTALLATION

This might be helpful to install graphviz. It is based on successful attempts from former students in order to install the lib.

On windows :

- download the msi file from graphviz.org
- open the msi file
- update the PATH with the location of the graphviz lib that was just installed
- if not already installed, install **pip**
- **pip install graphviz**
- it might be necessary to restart your computer

On mac :

- use **homebrew** (package manager for mac) and / or **pip**
